QuickFace Portable Flange Facing Tool

The QuickFace makes re-facing easy
Every day we’re presented with hundreds of situations where flanges that need to be re-faced are in awkward or even dangerous locations. Pipes can be situated at the top of a refinery installation or miles away from the nearest power line.

Now engineers can rely on all of the accuracy and performance of larger powered tools in a lightweight and extremely portable format. A simple and cost-effective solution with high design, the QuickFace from Hydratight turns a two-man, potentially awkward operation – with heavy equipment, compressors and portable generators – into a one-man job.

Light on weight, not on features
The portable QuickFace weighs only 15lbs (6.8kg). However, pared-down weight does not mean a loss of performance or quality. The QuickFace boasts a wide mounting range of 1” - 6” (25.4mm - 152.4mm) ID and is capable of facing 1” - 12” (25.4mm - 304.8mm) OD flanges using standard half-inch cutting tools.

In addition, the tool is equipped with different lead screws making it capable for resurfacing damaged raised-face or lens-ring joint flanges to the highest safety standards required.

Operation of the QuickFace couldn’t be simpler; after selecting the correct lead screw for the operation, the tool body is inserted into the pipe end and centers itself with adjustable locators to provide truly concentric operation. The arm is then rotated by hand using a worm-gear mechanism to provide a perfect spiral “gramophone” finish. The tool can be adjusted with a calibrated slide to define cut depth and the correct finish.

Specifications:
ID mounting range: 1” - 6” (25.4mm - 152.4mm)
Flange OD facing range: 1” - 12” (25.4mm - 304.8mm)
Weight: 15lbs (6.8kg)
